

Live Session Start and SMPTE Offset

# Live Session Start and SMPTE Offset

## Benefit

Set SMPTE Start Time At Cursor per session when composing to picture

Set Bar 1.1.1.001 At Cursor for each Session independently

These features allow to precisely setup a session on a cue by cue basis when composing or sound designing to picture/ media

It's common practice in many video (and audio) post-production houses to set a one-hour SMPTE offset (01:00:00:00). This avoids a problem commonly referred to as midnight, where a pre-roll passes through SMPTE time 00:00:00:00, which causes issues with some tape machines (such as the ADAT)
