

Type criteria like „perc Cinedrums“  
Depending on Track management  
visibility options the Track List  
Browser and the Tracks View will  
filter-out (hide) tracks that don't  
meet criteria similar to a Mac  
Spotlight search

If user selects one or multiple  
tracks in the Track List selected  
Track(s) will scroll into view in the  
Tracks View/ Session View if they  
are not already visible

# Live Track Visibility

Click Button to toggle show/  
hide Tracks in Tracks View/  
Session View

Vertically swipe dot to show/  
hide multiple Tracks

Option click dot to toggle  
visibility of only this Track or hide  
only this Track and show all others

Vertically swipe or Shift /  
Command select to affect multiple  
instances of the Record/ Input/  
Mute/ Solo/ buttons  
in the track header

## Benefit

Quickly navigate large projects based on search criteria or by hiding tracks from the Tracks View

Search and filter results like a Spotlight search in realtime

Click a predefined criteria button to show only these kind of tracks

Highlight a couple of tracks and create track visibility groups for easy recall (strings, brass, drums)

With a touch of a button or key command show only these groups of tracks in the Tracks View

All show/hide actions will be mirrored in the Tracks View and Session View

## Features

A Track List Browser to show/hide one or multiple Tracks

ability to re-name tracks in the Track List Browser

Drag and Drop one or multiple tracks so re-sort them

mute, solo, record enable even hidden tracks via the Track List Browser

### New Key Commands would improve workflow as well:

Open Track List in Browser

Hide/ Show selected tracks

Hide/ Show soloed tracks only (Hide/Show others)

Hide/ Show muted tracks only (Hide/Show others)

Hide/ Show Audio tracks

Hide/ Show Instrument tracks

Hide/ Show all tracks

Show only tracks with Clips at Edit Cursor

Show only tracks with Clips between locators
