

## Benefit

Quickly navigate large projects based on search criteria or by hiding tracks from the Tracks View

Search and filter results like a *Spotlight* search in realtime

Click a predefined criteria button to show only these kind of tracks

Highlight a couple of tracks and create track visibility groups for easy recall (strings, brass, drums)

With a touch of a button or key command show only these groups of tracks in the Tracks View

All show/hide actions will be mirrored in the Tracks View and Session View

## Features

A Track List Browser to show/hide one or multiple Tracks

ability to re-name tracks in the Track List Browser

Drag and Drop one or multiple tracks so re-sort them

mute, solo, record enable even hidden tracks via the Track List Browser

### New Key Commands would improve workflow as well:

Open Track List in Browser

Hide/ Show selected tracks

Hide/ Show soloed tracks only (Hide/Show others)

Hide/ Show muted tracks only (Hide/Show others)

Hide/ Show Audio tracks

Hide/ Show Instrument tracks

Hide/ Show all tracks

Show only tracks with Clips at Edit Cursor

Show only tracks with Clips between locators

# Live Track Visibility

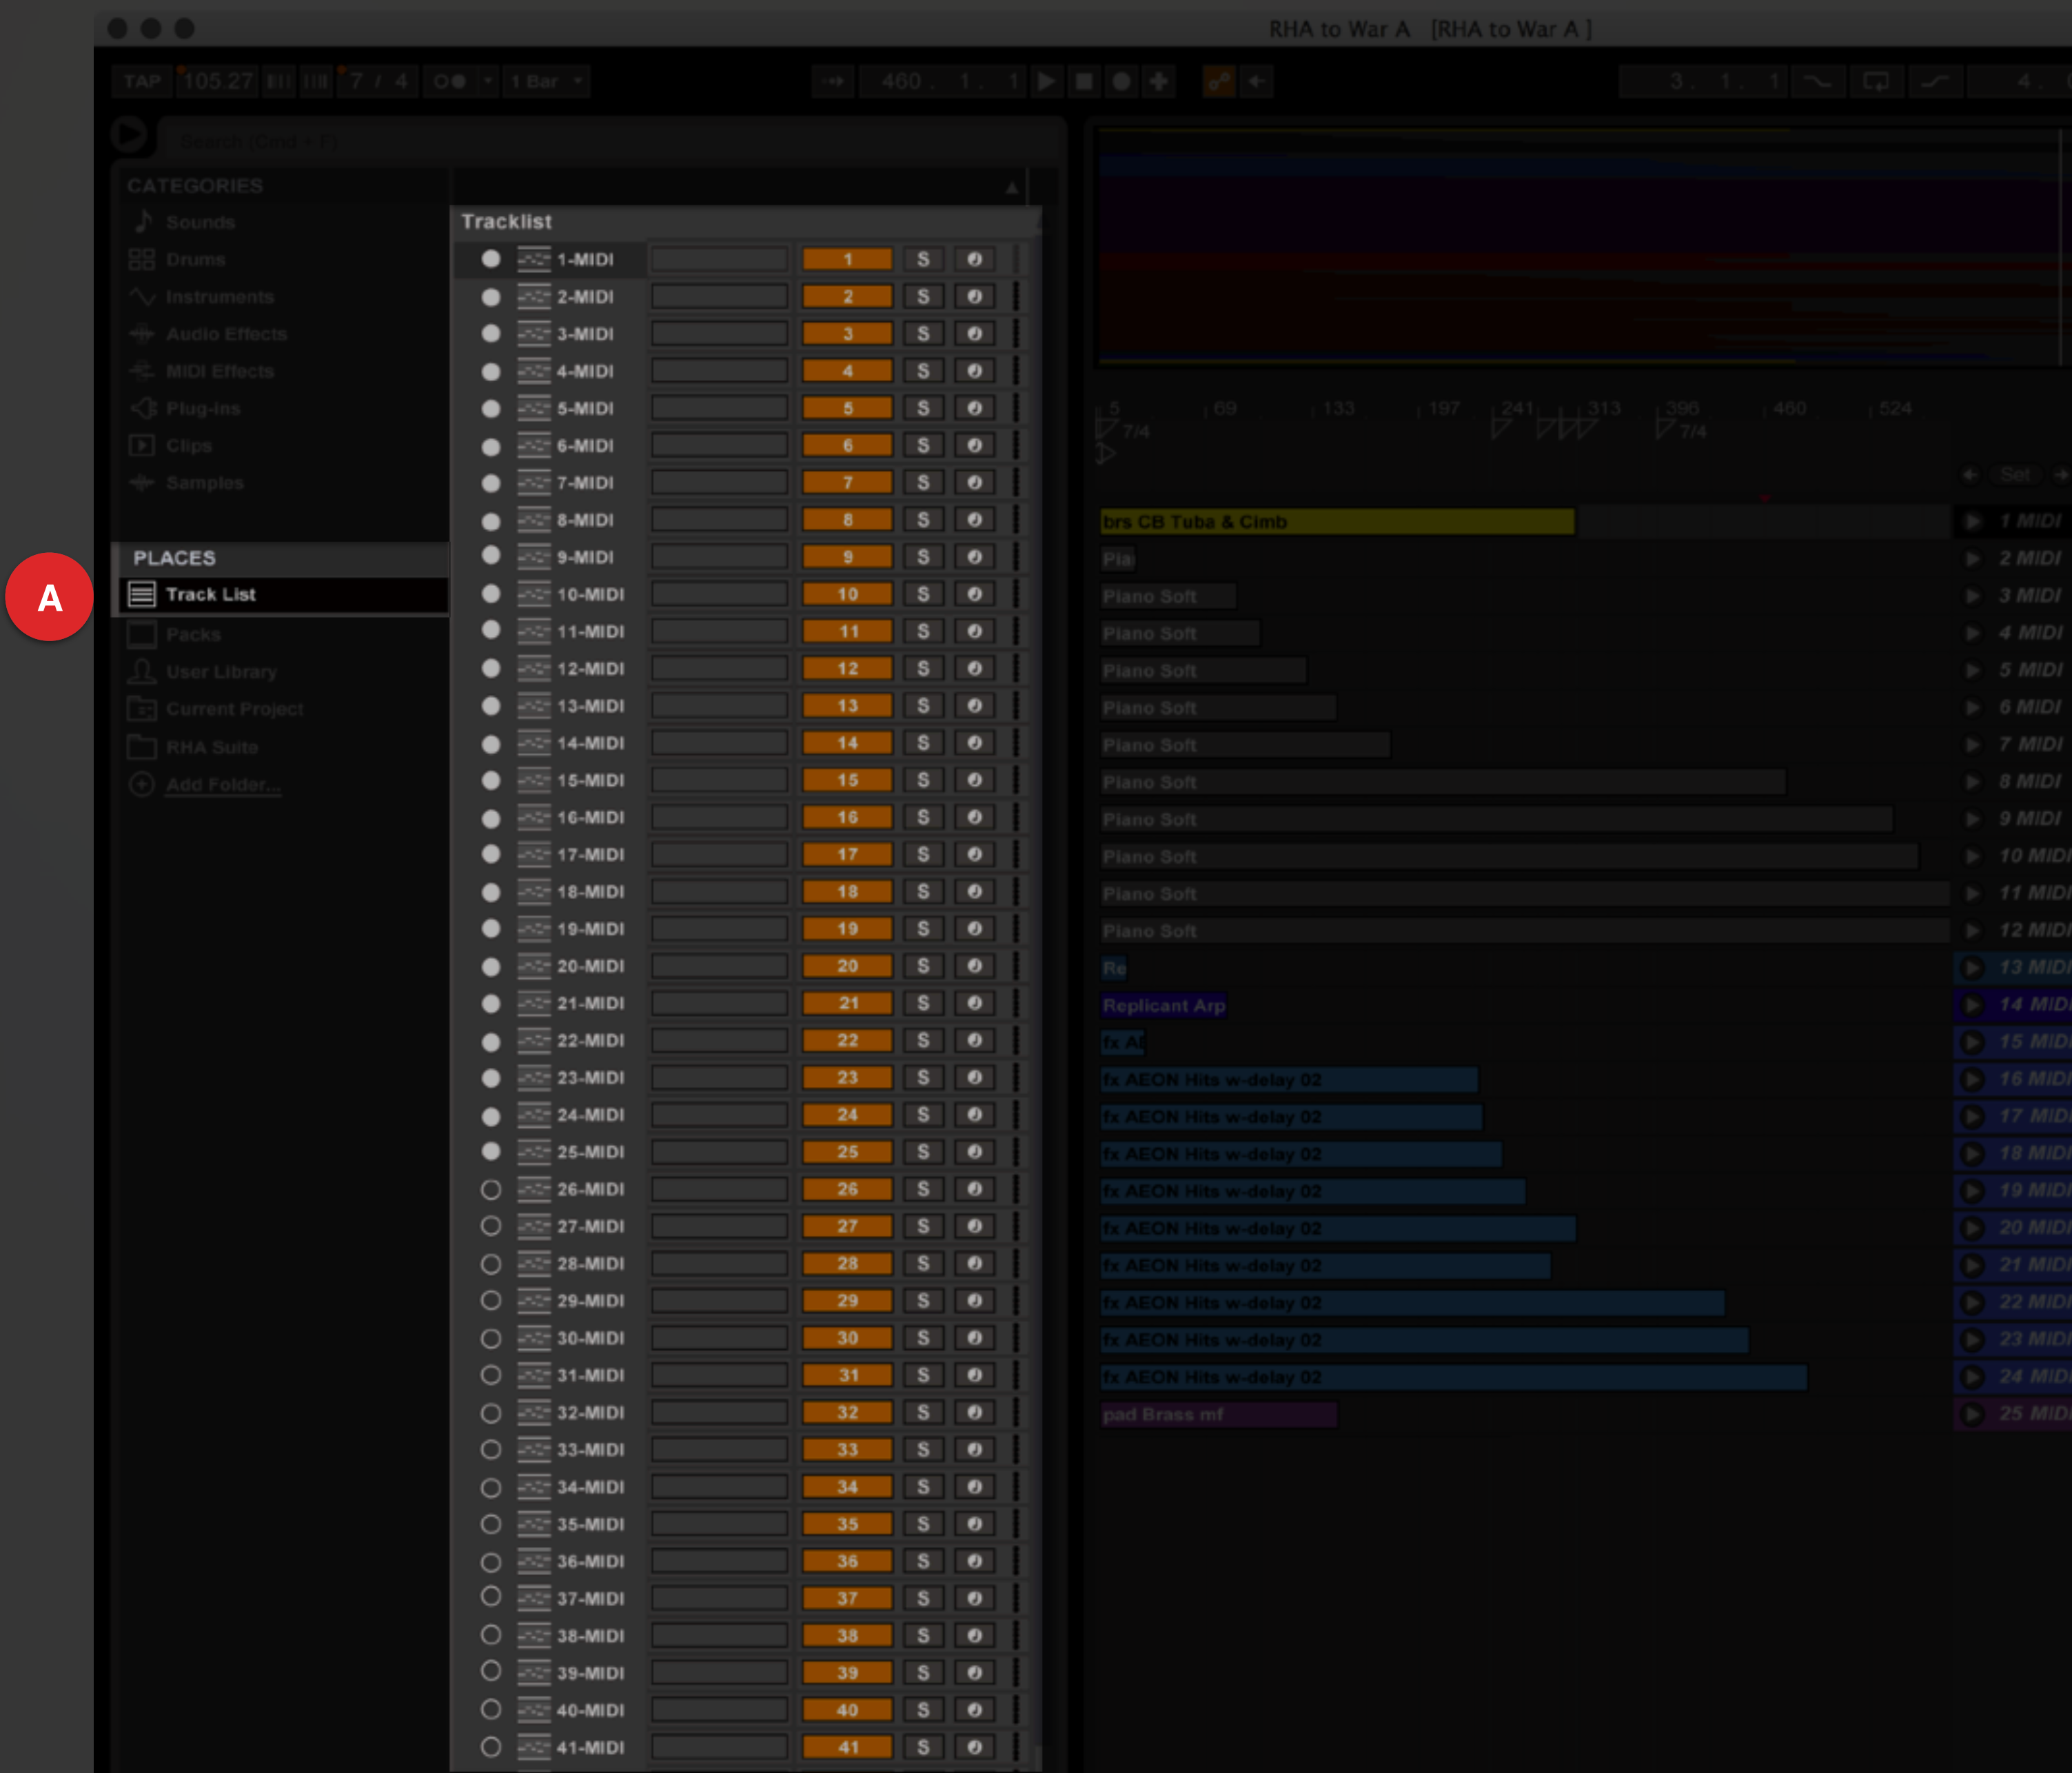

Click Track List button  
or use key command and Live will  
show the Track List Browser

User can show/hide multiple tracks  
by clicking or swiping the visibility  
dots to the left of the track icon  
These actions will be mirrored in  
the Tracks View

A secondary click onto multiple  
selected tracks in the Track List  
Browser allows the user to

drag and drop these tracks up  
and down the list to reorder

create visibility groups like  
(drums, bass, strings)  
these visibly groups can then  
be assigned to key  
commands or midi or OSC  
messages (iPad/Android  
Tablet controller apps) for  
show/hide actions

# Live Track Visibility

Click Button to toggle show/  
hide Tracks in Tracks View/  
Session View

Vertically swipe dot to show/  
hide multiple Tracks

Option click dot to toggle  
visibility of only this Track or hide  
only this Track and show all others

Vertically swipe or Shift /  
Command select to affect multiple  
instances of the Record/ Input/  
Mute/ Solo/ buttons  
in the track header

Type criteria like „perc Cinedrums“  
Depending on Track management visibility options the Track List Browser and the Tracks View will filter-out (hide) tracks that don't meet criteria similar to a Mac Spotlight search

If user selects one or multiple tracks in the Track List selected Track(s) will scroll into view in the Tracks View/ Session View if they are not already visible
