

LIVE - UX - PORTFOLIO

Samir El Borno • 2017

Live UX-Design Portfolio Introduction

The following Pages contain specific UX-Design enhancements from my experience of using these tools over 16 to 20 years on a daily basis.

All features you get to see lean strictly towards improvements in user interaction and usability enhancements incorporated into their current GUI designs. I focused on areas I stumble upon everyday or got pinpointed to by user conversations that I would like to see improved.

As a composer working with media all Live would benefit from improvements when working with picture or composing with sample libraries involving many articulations like Orchestral samples. We live in exciting times with so many products available to increase creativity. Still companies like Ableton should also focus on workflow improvements, consistency, stability and speed of workflow.

Everything you are going to see are pure mockups and don't yet exist in the mentioned products.
