# Live Track Visibility

Click Track List button
or use key command and Live will
show the Track List Browser

User can show/hide multiple tracks
by clicking or swiping the visibility
dots to the left of the track icon
These actions will be mirrored in
the Tracks View

A secondary click onto multiple
selected tracks in the Track List
Browser allows the user to

  drag and drop these tracks up
  and down the list to reorder

  create visibility groups like
  (drums, bass, strings)
  these visibly groups can then
  be assigned to key
  commands or midi or OSC
  messages (iPad/Android
  Tablet controller apps) for
  show/hide actions

X

B

Type criteria like „perc Cinedrums"
Depending on Track management
visibility options the Track List
Browser and the Tracks View will
filter-out (hide) tracks that don't
meet criteria similar to a Mac
Spotlight search

If user selects one or multiple
tracks in the Track List selected
Track(s) will scroll into view in the
Tracks View/ Session View if they
are not already visible

Live Track Visibility

Benefit

Quickly navigate large projects based on search criteria or by hiding tracks from the Tracks View

Search and filter results like a *Spotlight* search in realtime

Click a predefined criteria button to show only these kind of tracks

Highlight a couple of tracks and create track visibility groups for easy recall (strings, brass, drums)

With a touch of a button or key command show only these groups of tracks in the Tracks View

All show/hide actions will be mirrored in the Tracks View and Session View

Features

A Track List Browser to show/hide one or multiple Tracks

ability to re-name tracks in the Track List Browser

Drag and Drop one or multiple tracks so re-sort them

mute, solo, record enable even hidden tracks via the Track List Browser

New Key Commands would improve workflow as well:

Open Track List in Browser
